

Below you will find an interesting newsletter discussing how the US NAVY saved significant time and money on the repair of an HVAC Cooler. Of course this application is not limited to ships! Enecon Northeast has saved many Building Owners, and Operators substantial replacement costs by restoring all types of HVAC equipment. If you think we can help you, give us a call.

ENECON repairs and protects HVAC Condenser waterbox, divider plate, tubesheets, covers and piping connections from erosion/corrosion damage with ENECON High Performance CeramAlloy Coating system.

If you have a problem, ENECON has a solution!

*Welcome to the latest addition of our new newsletter. Each issue will provide the latest information, examples and news on our unique Applied Polymer Systems and Coatings. At ENECON Northeast we are dedicated to solving your toughest fluid flow repair and maintenance problems.*

EXPERIENCED FIELD ENGINEERING AND PROJECT SERVICES

JANUARY 2010 | VOLUME 2, ISSUE 1

### U.S. Navy Saves \$37,000 On Emergency Heat Exchanger Repairs

The engineers on this Navy Frigate recently discovered that one of the bleed air heat exchangers was suffering from such severe erosion/corrosion damage that the unit was not cooling sufficiently. Replacing the unit at a cost of over \$42,000 was not an option. Furthermore, the heat exchanger had to be up and running in just 7 days to permit the ship to sail on schedule. The engineers turned to their local ENECON Field Engineering Team in Virginia who quickly evaluated the situation and confirmed that the repairs could be completed in the available time and for a fraction of the cost of replacement. After the unit was grit-blasted, a 3 coat system of CeramAlloy CL+ was applied as illustrated in these photos. This entire project cost the Navy less than \$5,000.
