

ENECON Saves 50 Year Old Swimming Pool. Earns Praise From the Departments of the Army & the Air Force.

This 50' x 150' concrete swimming pool at a military base in Louisiana was in such disrepair that the base could not open it for the season because they were losing too much water!

Various swimming pool contractors provided cost estimates in the hundreds of thousands of dollars to repair and protect the pool. Since this was not in the budget, a decision was made to close the pool.

An ENECON Engineer happened to be on the base one day for another application and learned of the pool problem. He offered an unconventional solution: repair all cracks with **ENECRETE DuraQuartz** and then

seal the entire pool with **ENECLAD FPS**.

Once the pool was repaired and completely sealed, it could be painted with a conventional commercial pool paint to provide the desired aesthetics.

The entire project cost about \$80,000 -- a fraction of the proposed expenditures suggested by local pool contractors.

The base Commander was so pleased with the results, he forwarded an official commendation to ENECON expressing his thanks and satisfaction.
