**Leak Repair Kit**

- 2 x 167 gm A-Packs SpeedAlloy
- 1 x 250 gm unit SpeedAlloy QS

Plus mixing board, mixing knife, plastic applicator, reinforcement tape, sandpaper roll, alcohol wipes and disposable gloves...

All packed in a handy tool box!

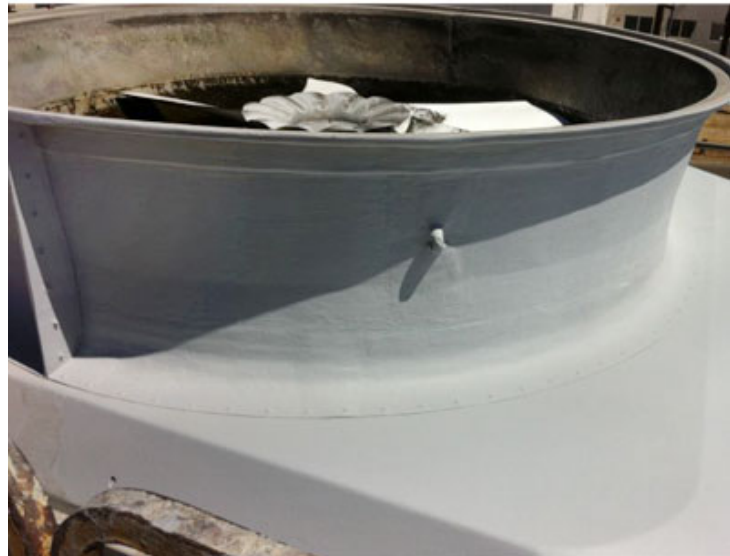

**Detention Center Stops Cooling Tower Corrosion with ENESEAL CR**

**Problem:** Cogen plant cooling tower was corroding at an accelerated rate.

**Solution:** After surface prep that consisted of power washing and grit blasting, ENESEAL CR was applied to provide long term corrosion resistance.

Cooling Towers are subject to constant damage due to weather including rain, snow and freezing. Corrosion is a constant problem for the facility engineer. Replacement of the mechanical equipment is often not an option.

The Engineers on this project needed to find a solution that would protect the equipment from further damage and could be applied by their in-house personnel. ENECON EneSeal CR is an acrylic coating system that contains a rust inhibitor which will protect the steel surfaces from further deterioration. EneSeal can be applied with a brush or rollers and clean-up is with water rather than solvents. This coating proved to be the best choice for the facility and their personnel.

Enecon announces new Emergency Leak Repair Kit. See our "new products" on the left side of the Newsletter.
