Nitrogen Manufacturing Plant Repairs & Protects Concrete Floors with ENECRETE, ENECLAD & CHEMCLAD

Client: Nitrogen Manufacturing Facility

Problem: 1,500 sq. m. concrete machine shop floors were damaged and cracking creating an unsafe work environment.

Solution: After the concrete floor was grit blasted and cleaned, all of the damage and cracks were repaired with ENECLAD CFS mixed with a local quartz sand.

ENECRETE DuraFill mixed with local quartz sand was applied as the first layer. ENECLAD FPS was then applied as the topcoat in both tile red and haze gray. CHEMCLAD SC in safety yellow was then used to create the necessary floor striping.

This project was completed on time and under budget.
