Northern California Pharmaceutical Company Uses ENESEAL to Protect Critical Rooftop Equipment

At this pharmaceutical company in Northern California, critical rooftop equipment was suffering from corrosion due to its close proximity to the ocean. A cost-effective solution was needed so the local ENECON Distributor was called in to help.

Without the ability to grit blast, it was decided that all critical rooftop equipment (electrical cabinets, air handlers, blowers, etc.) be protected with ENESEAL CR. The surfaces were prepared by power washing and 3 coats of ENESEAL CR were applied.

The building management was so impressed with these results that future applications have already been scheduled.
