Leak Repair Kit

2 x 167 gm A-Packs
 SpeedAlloy

1 x 250 gm unit
 SpeedAlloy QS

Plus mixing board,
 mixing knife, plastic
 applicator, reinforcement
 tape, sandpaper roll,
 alcohol wipes and
 disposable gloves...

All packed in a handy
 tool box!

A National Power company had requested a proposal for the application of the **ENECON** weatherproofing and sealing system to the roof sections of the switchgear storage building located at a local Substation. This building had a corrugated metal roof that had started to severely corrode causing a potential for leaks and an unsightly condition that neighbors had complained about. The building included approximately 1800 SF of roof area (with the corrugations adding 25% more area to be coated). The company wanted to eliminate the rust condition and improve the appearance of the structure. The application of the **ENECON ENESEAL CR** weatherproof coating to the entire roof accomplished both goals.

ENECON Northeast APS accomplished basic surface preparation to ensure that the roof surfaces were clean, lightly roughened and dry. For this application, the corrugated roof was pressure washed and coated using a boom truck to keep traffic on the roof to a minimum.

A three layer, flexible coating system was then applied using **ENECON ENESEAL CR**, a one component, corrosion inhibited, water based weatherproofing copolymer. The **ENESEAL** systems create a highly flexible, joint bridging, breathable, seamless, "skin" that provides excellent weather and UV resistance.

Enecon announces new Emergency Leak Repair Kit. See our "new products" on the *left side* of the Newsletter.
